Information on The Type C Electrical Outlet

The Type C plug is technically known as the CEE 7/16 (Europlug 2.5 A/250 V unearthed). There is a similar plug with slightly larger pins known as the CEE 7/17. Both types are unearthed and have two round pins which converge slightly. The CEE 7/16 is intended for devices that require 2.5 A or less. The 19 mm separation of the pins and the pins' 4 mm length allow for its safe insertion in most Type C, Type E, Type F, Type H, and some Type L outlets. The larger CEE 7/17 has a round plastic or rubber base that prevents it from being inserted into small sockets. The base has holes to accommodate the side contacts and socket earth pins.
